

IT business services...

Are your business processes becoming increasingly inefficient and cumbersome, and you can't seem to get the critical information you need to make timely and effective decisions?

Having the right information technology is an integral part of modern business, not only for helping to improve the availability and quality of vital financial and operating information, but for also improving efficiency throughout the whole organisation.

We offer a wide range of solutions including:

Accounting and payroll software: We welcome the opportunity to talk with you about how we are able to increase productivity and reduce manual work in your accounting processes to improve overall efficiency and effectiveness in your business. Our concrete, actionable and cost-effective recommendations have resulted in increased revenue and improved profitability for many clients. We remain fully independent and continue to enjoy strong business relationships with many of the leading software providers including Sage.

Forecasting solutions: In the current economic climate the key to continuing business growth and success, or indeed to merely avoid "negative" growth, involves the use of accurate financial forecasting. We will discuss your requirements with you in detail and can then provide a number of different forecasting and cashflow solutions to help your business move forward.

Development of management information systems: We will review your business processes, identify efficiencies and work with you to help you to produce more meaningful management information. The identification of Key Performance Indicators will help reduce costs and maximise profits. We can help ensure all key business processes are as fully automated as possible.

IT health and security: We can help you identify and mitigate the risks inherent in today's increasingly interconnected business environments. We provide a wide range of services including continuity planning, risk identification and management.

Training services: If you are serious about getting value from your current IT systems, or you're looking for ways to keep your business ahead of the competition, then we can help. Our training courses in Sage, Windows and Microsoft Office, cover all versions of the software and cater for all user levels and competencies. We specialise in providing small-group onsite tailored training courses at your workplace to suit your business requirements.
